Tutorial Exercises

Conclusion

Suggested
Readings

- Audible 4.57/5 (if you did not hear something during the lecture ask, seat in the front rows, lecture capture)
- Pace 3/3 - slightly fast (ask me, office hours, lecture capture) or slightly slow (books)
- Explains material clearly 4.43/5 - (ask me, office hours, books)
- Relevance of the topic 4.36/5 - (ask me)
- Useful information on keats 4.18/5 - (in the form of announcements)
- Module objectives clear 4.32/5
- Assessment methods 4.21/5 - (more on the exam)
- Office hours (haven't used, 1 agree)
- Room functions 4.25/5

Response to interim feedback about the lecturer

Tutorial Exercises

Conclusion

Suggested Readings

- Well taught module. Keep it up!
- The professor is perfect !!
- Snippets of code, SQL commands - the next lectures have many. More on books. <https://www.w3schools.com/sql/>
- The contents of the lecture and course are clear and well-taught although a little basic. Given the level of this unit, I think the scope could expand somewhat. - books, material on whiteboard
- Writing on white board - write larger, not near the projector (ok)
- Past exams - <https://internal.kcl.ac.uk/NMS/depts/informatics/stu/pgt/exampapers.aspx>

Session Objectives

4/63

Introduction

Retrieval

- Select
- Where
- Sorting
- Aggregation
- Grouping
- Having

Manipulation

- Insert
- Delete
- Update

Tutorial
Exercises

Conclusion

- Suggested
Readings

In this session, you will learn:

- Structured Query Language (SQL)
- SELECT query
 - Select
 - Where
 - Sorting
 - Aggregation
 - Grouping
 - Having

Introduction

5/63

Introduction

Retrieval

Select
Where
Sorting
Aggregation
Grouping
Having

Manipulation

Delete
Update

Tutorial Exercises

Conclusion

Suggested
Readings

SQL is a database language that:

- Allows you to create database and table structures, to perform data management tasks and to perform complex queries designed to transform the raw data into useful information.
- It is portable, it is a de facto standard SQL

Introduction

Retrieval

Select
Where
Sorting
Aggregation
Grouping
Having

Manipulation

Insert
Delete
Update

Tutorial Exercises

Conclusion

Suggested
Readings

SQL functions fit into two broad categories:

- Data Definition Language (DDL): SQL includes commands to create database objects such as tables, indexes, and views, as well as commands to define access rights to those database objects
- It is a data manipulation language (DML): SQL includes commands to insert, update, delete, and retrieve data within the database tables

Data Manipulation Language (DML)

7/63

Introduction

Retrieval

Select
Where
Sorting
Aggregation
Grouping
Having

Manipulation

Insert
Delete
Update

Tutorial

Exercises

Conclusion

Suggested
Readings

DML allows to retrieve and update data:

- SELECT statement retrieves data
- INSERT, UPDATE, DELETE statements update data

Database Example

8/63

Introduction

Retrieval

- Select
- Where
- Sorting
- Aggregation
- Grouping
- Having

Manipulation

- Insert
- Delete
- Update

Tutorial

Exercises

Conclusion

- Suggested Readings

We are going to illustrate SQL statements using the following database of a letting agency:

Branch (branchNo, street, city, postcode)

Staff (staffNo, fName, lName, position, sex, DOB, salary, branchNo)

PropertyForRent (propertyNo, street, city, postcode, type, rooms, rent, ownerNo, staffNo, branchNo)

Data Retrieval

9/63

Introduction

Retrieval

Select

Where

Sorting

Aggregation

Grouping

Having

Manipulation

Insert

Delete

Update

Tutorial

Exercises

Conclusion

Suggested

Readings

- The purpose of the `SELECT` statement is to retrieve and display data from one or more database tables

Select Statement

10/63

Introduction

Retrieval

Select
Where
Sorting
Aggregation
Grouping
Having

Manipulation

Insert
Delete
Update

Tutorial
Exercises

Conclusion

Suggested
Readings

Select Statement

```
SELECT [DISTINCT | ALL]
        { * | [columnExpression [AS newName]] [, ...] }
FROM tableName [alias] [, ...]
[WHERE condition]
[GROUP BY columnList] [HAVING condition]
[ORDER BY columnList]
```

- Order of the clauses cannot be changed
- Only SELECT and FROM are mandatory

Select Statement Execution

11/63

Introduction

Retrieval

- Select
- Where
- Sorting
- Aggregation
- Grouping
- Having

Manipulation

- Insert
- Delete
- Update

Tutorial Exercises

Conclusion

- Suggested
Readings

FROM	Specifies table(s) to be used
WHERE	Filters rows
GROUP BY	Forms groups of rows with same column value
HAVING	Filters groups subject to some condition
SELECT	Specifies which columns are to appear in output
ORDER BY	Specifies the order of the output

Simple SELECT

12/63

Introduction

Retrieval

Select
Where
Sorting
Aggregation
Grouping
Having

Manipulation

Insert
Delete
Update

Tutorial
Exercises

Conclusion

Suggested
Readings

```
SELECT [DISTINCT | ALL]  
      { * | [columnExpression [AS newName]] [, ...] }  
FROM tableName [alias] [, ...]
```

- Can use * as an abbreviation for all columns
- Use DISTINCT to eliminate duplicates (ALL is the default option)
- To name column, use AS clause

Simple SELECT: Example

13/63

Tutorial
Exercises

Conclusion

Suggested
Readings

Produce a list of salaries for all staff, showing only the staff number, the first and last names, and the salary details.

```
SELECT staffNo, fName, lName, salary  
FROM Staff;
```

staffNo	fName	lName	salary
SL21	John	White	30000.00
SG37	Ann	Beech	12000.00
SG14	David	Ford	18000.00
SA9	Mary	Howe	9000.00
SG5	Susan	Brand	24000.00
SL41	Julie	Lee	9000.00

Row selection (WHERE clause)

16/63

Introduction

Retrieval

Select

Where

Sorting

Aggregation

Grouping

Having

Manipulation

Insert

Delete

Update

Tutorial

Exercises

Conclusion

Suggested

Readings

```
SELECT [DISTINCT | ALL]
      { * | [columnExpression [AS newName]] [, ...] }
FROM tableName [alias] [, ...]
```

[WHERE condition]

Comparison

Compare the value of one expression to the value of another expression

BETWEEN/NOT BETWEEN

Test whether the value of an expression falls within a specified range of values

IN/NOT IN

Test whether the value of an expression equals one of a set of values

LIKE/NOT LIKE

Test whether a string matches a specified pattern

IS NULL/ NOT IS NULL

Test whether a column has a null value

Comparison

17/63

Introduction

Retrieval

Select
Where
Sorting
Aggregation
Grouping
Having

Manipulation

Insert
Delete
Update

Tutorial
Exercises

Conclusion

Suggested
Readings

```
SELECT [DISTINCT | ALL]
        { * | [columnExpression [AS newName]] [, ...] }
FROM tableName [alias] [, ...]
[WHERE condition]
```

- The following simple comparison operators are available:
=, <>, <, ≤, >, ≥
- More complex predicates can be generated using the logical operators AND, OR and NOT

Comparison: Example

18/63

Introduction

Retrieval

Select

Where

Sorting

Aggregation

Grouping

Having

Manipulation

Insert

Delete

Update

Tutorial

Exercises

Conclusion

Suggested

Readings

branchNo	street	city	postcode
B005	22 Deer Rd	London	SW1 4EH
B003	163 Main St	Glasgow	G11 9QX
B002	56 Clover Dr	London	NW10 6EU

```
SELECT branchNo,street,city,postcode  
FROM branch  
WHERE city='London' OR city='Glasgow'
```

- What does this query do?

BETWEEN / NOT BETWEEN

19/63

Introduction

Retrieval

Select
Where
Sorting
Aggregation
Grouping
Having

Manipulation

Insert
Delete
Update

Tutorial Exercises

Conclusion

Suggested
Readings

```
SELECT [DISTINCT | ALL]
        { * | [columnExpression [AS newName]] [, ...] }
FROM tableName [alias] [, ...]
[WHERE condition]
```

- The BETWEEN / NOT BETWEEN is a simpler way to express a search condition when considering a range of values
- They do not add much expressibility since that can be expressed using two comparison tests

Range: Exercise

Update

Tutorial

Exercises

Conclusion

Suggested

Readings

```
SELECT [DISTINCT | ALL]
        { * | [columnExpression [AS newName]] [, ...] }
FROM tableName [alias] [, ...]
[WHERE condition]
```

- IS NULL / NOT IS NULL test whether a column has a null value

Pattern: Example

26/63

Viewing Table

CLIENTNO	PROP	VIEWDATE	COMMNT
-----	----	-----	-----
CR56	PA14	24-MAY-04	too small
CR76	PG4	20-APR-04	too remote
CR56	PG4	26-MAY-04	
CR62	PA14	14-MAY-04	no dining room
CR56	PG36	28-APR-04	

```
SELECT clientNo, viewDate
FROM Viewing
WHERE propertyNo = 'PG4' AND commnt IS NULL
```

- What does this query do?

Row sorting (ORDER BY clause)

27/63

Introduction

Retrieval

Select

Where

Sorting

Aggregation

Grouping

Having

Manipulation

Insert

Update

Tutorial

Exercises

Conclusion

Suggested

Readings

```
SELECT [DISTINCT | ALL]
        { * | [columnExpression [AS newName]] [, ...] }
FROM tableName [alias] [, ...]
[WHERE condition]
[ORDER BY columnList]
```

The ORDER BY clause:

- Consists of a list of column identifiers that the result is to be sorted on, separated by commas
- Allows the retrieved rows to be ordered in ascending (ASC) or descending (DESC) order
- ASC is the default ordering option:

ORDER BY type is the same as ORDER BY type ASC

Sorting: Exercise

28/63

The following query

```
SELECT propertyNo, type, rooms, rent
FROM PropertyForRent
ORDER BY type
```

produces:

propertyNo	type	rooms	rent
PL94	Flat	4	400
PG4	Flat	3	350
PG36	Flat	3	375
PG16	Flat	4	450
PA14	House	6	650
PG21	House	5	600

- Write an SQL sentence that arranges these four flats in this list in order of rent

SQL Aggregate Functions

29/63

To perform some form of summation or aggregation of data

- There are eight main aggregate functions:

- 1** COUNT returns number of values in specified column
- 2** COUNT (*) counts all rows of a table, regardless of nulls or duplicate values
- 3** SUM returns sum of values in specified column
- 4** AVG returns average of values in specified column
- 5** STDDEV returns standard deviation of values in specified column
- 6** VARIANCE returns variance of values in specified column
- 7** MIN returns smallest value in specified column
- 8** MAX returns largest value in specified column

- COUNT, MIN, and MAX apply to numeric and non-numeric fields, but SUM, STDDEV, VARIANCE and AVG may be used on numeric fields
- DISTINCT can be used to eliminate duplicates

Conclusion

Suggested
Readings

GROUP BY `columnList`

- The GROUP BY clause forms groups of rows with same column name (get sub-totals)
- SELECT and GROUP BY closely integrated: each item in SELECT list must be single-valued per group, and SELECT clause may only contain:
 - All column names in SELECT list must appear in GROUP BY clause unless name is used only in an aggregate function
- If WHERE is used with GROUP BY, WHERE is applied first, then groups are formed from remaining rows satisfying predicate

GROUP BY: Example

36/63

Introduction

Retrieval

Select

Where

Sorting

Aggregation

Grouping

Having

Manipulation

Insert

Delete

Update

Tutorial

Exercises

Conclusion

Suggested

Readings

staffNo	fName	lName	position	sex	DOB	salary	branchNo
SL21	John	White	Manager	M	1-Oct-45	30000.00	B005
SG37	Ann	Beech	Assistant	F	10-Nov-60	12000.00	B003
SG14	David	Ford	Supervisor	M	24-Mar-58	18000.00	B003
SA9	Mary	Howe	Assistant	F	19-Feb-70	9000.00	B007
SG5	Susan	Brand	Manager	F	3-Jun-40	24000.00	B003
SL41	Julie	Lee	Assistant	F	13-Jun-65	9000.00	B005

```
SELECT branchNo, COUNT(staffNo) AS myCount,  
       SUM(salary) AS mySum  
FROM Staff  
GROUP BY branchNo;
```

- What does this query do?

GROUP BY: Example

37/63

```
SELECT branchNo, COUNT(staffNo) AS myCount, SUM(salary) AS mySum
FROM Staff
GROUP BY branchNo;
```

branchNo	staffNo	salary		COUNT(staffNo)	SUM(salary)
B003	SG37	12000.00	}	3	54000.00
B003	SG14	18000.00			
B003	SG5	24000.00			
B005	SL21	30000.00	}	2	39000.00
B005	SL41	9000.00			
B007	SA9	9000.00	}	1	9000.00

- 1 SQL divides the staff into groups according to their respective branch numbers
- 2 For each group, SQL computes the number of staff members and calculates the sum of the values in the salary column to get the total of their salaries
- 3 Finally, the result is sorted in ascending order of branch number, branchNo

GROUP BY columnList

HAVING condition

- HAVING clause is designed for use with GROUP BY to restrict groups that appear in final result table
- Similar to WHERE, but WHERE filters individual rows whereas HAVING filters groups
- Column names in HAVING clause must also appear in the GROUP BY list or be contained within an aggregate function

HAVING: Example

41/63

staffNo	fName	lName	position	sex	DOB	salary	branchNo
SL21	John	White	Manager	M	1-Oct-45	30000.00	B005
SG37	Ann	Beech	Assistant	F	10-Nov-60	12000.00	B003
SG14	David	Ford	Supervisor	M	24-Mar-58	18000.00	B003
SA9	Mary	Howe	Assistant	F	19-Feb-70	9000.00	B007
SG5	Susan	Brand	Manager	F	3-Jun-40	24000.00	B003
SL41	Julie	Lee	Assistant	F	13-Jun-65	9000.00	B005

```
SELECT branchNo,  
COUNT(staffNo) AS count,  
SUM(salary) AS sum FROM Staff  
GROUP BY branchNo HAVING COUNT(staffNo) > 1
```

Update

Tutorial
Exercises

Conclusion

Suggested
Readings

```
INSERT INTO table_name [(columnList)] VALUES  
      (dataValueList)
```

- `columnList` is optional; if omitted, SQL assumes a list of all columns in their original CREATE TABLE order
- Any columns omitted must have been declared as NULL when table was created, unless DEFAULT was specified when creating column
- `dataValueList` must match `columnList`

Insert Rows: Example

Suggested

Readings

Branch (branchNo, street, city, postcode)
Staff (staffNo, fName, lName, position, sex, DOB, salary, branchNo)
PropertyForRent (propertyNo, street, city, postcode, type, rooms,
rent, ownerNo, staffNo, branchNo)

Insert a new row into Staff table supplying data for all mandatory columns.

```
INSERT INTO Staff (staffNo, fName, lName, position, salary,  
branchNo)  
VALUES ('SG44', 'Anne', 'Jones', 'Assistant', 8100, 'B003')
```

or

```
INSERT INTO Staff  
VALUES ('SG44', 'Anne', 'Jones', 'Assistant', NULL, NULL,  
8100, 'B003');
```

Copying Rows

Tutorial Exercises

Conclusion

Suggested
Readings

`DELETE FROM tableName [WHERE searchCondition]`

- `tableName` can be name of a base table or an updatable view.
- `searchCondition` is optional; if omitted, all rows are deleted from table. This does not delete table. If `searchCondition` is specified, only those rows that satisfy condition are deleted.

Update Rows: Example

47/63

Introduction

Retrieval

- Select
- Where
- Sorting
- Aggregation
- Grouping
- Having

Manipulation

- Insert
- Delete**
- Update

Tutorial Exercises

Conclusion

- Suggested Readings

Branch (branchNo, street, city, postcode)
Staff (staffNo, fName, lName, position, sex, DOB, salary, branchNo)
PropertyForRent (propertyNo, street, city, postcode, type, rooms,
rent, ownerNo, staffNo, branchNo)

Delete all properties that relate to branch B003.

```
DELETE FROM PropertyForRent  
WHERE branchNo = 'B003';
```

Update Rows

48/63

Introduction

Retrieval

Select
Where
Sorting
Aggregation
Grouping
Having

Manipulation

Insert
Delete
Update

Tutorial
Exercises

Conclusion

Suggested
Readings

```
UPDATE tableName  
SET columnName1 = dataValue1 [, columnName2 =  
    dataValue2...] [WHERE searchCondition]
```

- `tableName` can be name of a base table or an updatable view.
- `SET` clause specifies names of one or more columns that are to be updated.

Update Rows: Example

49/63

Introduction

Retrieval

- Select
- Where
- Sorting
- Aggregation
- Grouping
- Having

Manipulation

- Insert
- Delete
- Update**

Tutorial Exercises

Conclusion

- Suggested Readings

Branch (branchNo, street, city, postcode)
Staff (staffNo, fName, lName, position, sex, DOB, salary, branchNo)
PropertyForRent (propertyNo, street, city, postcode, type, rooms,
rent, ownerNo, staffNo, branchNo)

Give all staff a 3% pay increase.

```
UPDATE Staff SET salary = salary*1.03;
```

Update: Exercise I

Exercises

Conclusion

Suggested
Readings

Branch (branchNo, street, city, postcode)
Staff (staffNo, fName, lName, position, sex, DOB, salary, branchNo)
PropertyForRent (propertyNo, street, city, postcode, type, rooms,
rent, ownerNo, staffNo, branchNo)

Assume there is a table StaffPropCount that contains names of staff and number of properties they manage:

StaffPropCount(staffNo, fName, lName, propCnt)

Populate StaffPropCount using Staff and PropertyForRent tables

Exercise 1
