In this session, you will learn:

- The purpose of normalization.
- The concept of functional dependency, which describes the relationship between attributes.
- How to undertake the process of normalization
- First Normal Form (1NF), Second Normal Form (2NF), and Third Normal Form (3NF).

Identifying  
Functional  
Dependencies

## Normalization

UNF  
1NF  
2NF  
3NF

## Tutorial Exercises

## Conclusion

Suggested  
Readings

- Normalization is a technique for producing a set of **suitable** relations that support the data requirements of an enterprise:
  - the minimal number of attributes necessary to support the data requirements
  - attributes with a close logical relationship are in the same relation
  - minimal redundancy with each attribute represented only once with the important exception of attributes that form all or part of foreign keys

# Purpose of Normalization

6/56

Introduction

**Purpose of  
Normalization**

Functional  
Dependencies

Identifying  
Functional  
Dependencies

Normalization

UNF

1NF

2NF

3NF

Tutorial  
Exercises

Conclusion

Suggested  
Readings

Suitable relations:

- Are easier for the user to access and maintain the data
- Take up minimal storage space on the computer

# Data Redundancy Problems

7/56

Purpose of  
Normalization

Functional  
Dependencies

Identifying  
Functional  
Dependencies

Normalization

UNF  
1NF  
2NF  
3NF

Tutorial  
Exercises

Conclusion

Suggested  
Readings

Relations that contain redundant information may potentially suffer from update anomalies.

- Insertion
- Deletion
- Modification

# Example

8/56

StaffBranch

staffNo	sName	position	salary	branchNo	bAddress
SL21	John White	Manager	30000	B005	22 Deer Rd, London
SG37	Ann Beech	Assistant	12000	B003	163 Main St, Glasgow
SG14	David Ford	Supervisor	18000	B003	163 Main St, Glasgow
SA9	Mary Howe	Assistant	9000	B007	16 Argyll St, Aberdeen
SG5	Susan Brand	Manager	24000	B003	163 Main St, Glasgow
SL41	Julie Lee	Assistant	9000	B005	22 Deer Rd, London

**StaffBranch relation has redundant data:  
the details of a branch are repeated for every  
member of staff**

Functional  
Dependencies

Normalization

UNF  
1NF  
2NF  
3NF

Tutorial  
Exercises

Conclusion

Suggested  
Readings

# Example: Insert Anomalies

9/56

Staff Branch

staffNo	sName	position	salary	branchNo	bAddress
SL21	John White	Manager	30000	B005	22 Deer Rd, London
SG37	Ann Beech	Assistant	12000	B003	163 Main St, Glasgow
SG14	David Ford	Supervisor	18000	B003	163 Main St, Glasgow
SA9	Mary Howe	Assistant	9000	B007	16 Argyll St, Aberdeen
SG5	Susan Brand	Manager	24000	B003	163 Main St, Glasgow
SL41	Julie Lee	Assistant	9000	B005	22 Deer Rd, London

- To insert the details of new staff located at branch number *B007*, we must enter the correct details of branch number *B007* so that the branch details are consistent with values for branch *B007* in other tuples
- To insert details of a new branch that currently has no members of staff, it is necessary to enter nulls into the attributes for staff, which is not possible due to the integrity constraint

# Example: Deletion Anomalies

10/56

Staff Branch

staffNo	sName	position	salary	branchNo	bAddress
SL21	John White	Manager	30000	B005	22 Deer Rd, London
SG37	Ann Beech	Assistant	12000	B003	163 Main St, Glasgow
SG14	David Ford	Supervisor	18000	B003	163 Main St, Glasgow
SA9	Mary Howe	Assistant	9000	B007	16 Argyll St, Aberdeen
SG5	Susan Brand	Manager	24000	B003	163 Main St, Glasgow
SL41	Julie Lee	Assistant	9000	B005	22 Deer Rd, London

- If we delete a tuple that represents the last member of staff located at a branch, the details about that branch are also lost from the database.

# Functional Dependency

13/56

Introduction

Purpose of  
Normalization

Functional  
Dependencies

Identifying  
Functional  
Dependencies

Normalization

UNF

1NF

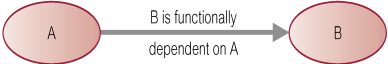

2NF

3NF

Tutorial  
Exercises

Conclusion

Suggested  
Readings

- Important concept associated with normalization.
- Functional dependency describes relationship between attributes.
- For example, if  $A$  and  $B$  are attributes of relation  $R$ ,  $B$  is functionally dependent on  $A$  (denoted  $A \rightarrow B$ ), if each value of  $A$  in  $R$  is associated with exactly one value of  $B$  in  $R$
- Diagrammatic representation:  

- The *determinant* of a functional dependency refers to the attribute or group of attributes on the left-hand side of the arrow

# Functional Dependency: Example

Tutorial

Exercises

Conclusion

Suggested  
Readings

Customer_No	Name	Address	Current_Balance
124	Sally Adams	5 Bertram Road	418.50
260	Mary Nelson	3 London Road	178.70
564	Sally Adams	185 Lark Lane	498.00

- *Name* is functionally dependent on *Customer\_No*. We can also say that *Customer\_No* functionally determines *Name*:

$Customer\_No \rightarrow Name$

- *Address* is NOT functionally dependent on *Name*

# Full Functional Dependency

16/56

Introduction

Purpose of  
Normalization

**Functional  
Dependencies**

Identifying  
Functional  
Dependencies

Normalization

UNF  
1NF  
2NF  
3NF

Tutorial  
Exercises

Conclusion

Suggested  
Readings

## Full Functional Dependency

Full functional dependency indicates that if  $A$  and  $B$  are attributes of a relation,  $B$  is fully functionally dependent on  $A$ , if  $B$  is functionally dependent on  $A$ , but not on any proper subset of  $A$

# Partial Dependency

17/56

Functional  
Dependencies

Identifying  
Functional  
Dependencies

Normalization

UNF  
1NF  
2NF  
3NF

Tutorial  
Exercises

Conclusion

Suggested  
Readings

## Transitive Dependency

Transitive dependency describes a condition where  $A$ ,  $B$ , and  $C$  are attributes of a relation such that if  $A \rightarrow B$  and  $B \rightarrow C$ , then  $C$  is transitively dependent on  $A$  via  $B$  (provided that  $A$  is not functionally dependent on  $B$  or  $C$ ).

# Identifying Functional Dependencies

19/56

Introduction

Purpose of  
Normalization

Functional  
Dependencies

Identifying  
Functional  
Dependencies

Normalization

UNF  
1NF  
2NF  
3NF

Tutorial  
Exercises

Conclusion

Suggested  
Readings

- Identifying all functional dependencies between a set of attributes is relatively simple if the meaning of each attribute and the relationships between the attributes are well understood
- However, if the users are unavailable for consultation and/or the documentation is incomplete then depending on the database application it may be necessary for the database designer to use their common sense and/or experience to provide the missing information

- A table that contains one or more repeating groups.
- This happens usually when data from a form is transformed into a table

The diagram shows a 'DreamHome Lease' form with several repeating groups. The form is divided into sections by horizontal lines. The top section is labeled 'DreamHome Lease'. Below it, there are three more sections, each also labeled 'DreamHome Lease'. The first section contains fields for 'Client Number' (CR76), 'Property Number' (PG4), 'Full Name' (John Kay), and 'Property Address' (6 Lawrence St, Glasgow). The second section contains fields for 'Monthly Rent' (350), 'Owner Number' (CO40), 'Rent Start' (01/07/03), and 'Full Name' (Tina Murphy). The third section contains fields for 'Rent Finish' (31/08/04) and 'Full Name' (Please print).

Conclusion

Suggested  
Readings

- 1** Nominate an attribute or group of attributes to act as the key for the unnormalized table.
- 2** Identify the repeating group(s) in the unnormalized table which repeats for the key attribute(s).
- 3** Remove the repeating group by
  - Entering appropriate data into the empty columns of rows containing the repeating data (flattening the table).
  - Or by
  - Placing the repeating data along with a copy of the original key attribute(s) into a separate relation.

## Second Normal Form (2NF)

A relation that is in 1NF and every non-primary-key attribute is fully functionally dependent on the primary key

Readings

## 1NF to 2NF

- 1 Identify the primary key for the 1NF relation.
- 2 Identify the functional dependencies in the relation.
- 3 If partial dependencies exist on the primary key remove them by placing them in a new relation along with a copy of their determinant

# 1NF to 2NF: Example

# 1NF to 2NF: Tips

45/56

- Look at entities with composite primary keys (formed by more than one attribute)
- Find any attributes which are functionally dependant on only part of the key. Remove these into a separate entity
